VIZIER PRESERVATION TOOLKIT — QUICK START CARD

THE VIZIER METHOD IN 30 SECONDS

Modern AIs are powerful thinkers but poor archivists. They forget files, lose decisions, and drift off track. The Vizier Toolkit gives you structure the AI cannot create.

1 — Start Projects Cleanly

Open with one message: what you're doing, what you have, what help you want.

2 — Save Checkpoints When Progress Is Real

Use the Toolkit's checkpoint generator. A checkpoint records what you completed, decisions, files, and next steps.

3 — Restore When You Want the AI to Continue

When continuity matters: 1) Upload artifacts, 2) Paste your last checkpoint, 3) Use the restoration prompt from the Toolkit.
